JCB Synchro-shuttle transmission: It provides superb drive power in all conditions. It consists of a 4-speed, full synchromesh gearbox with integral torque convertor and electrically operated reversing power shuttle.

- Easy-to-use, column mounted electric reversing shuttle which can change machine direction while allowing operator to keep hands on the steering wheel leading to fast cycle times.
- The pedal layout and conventional 4-pattern gear lever with transmission disconnect switch adds to the overall ease of operation. On-the-move gear changes are possible.
- Torque convertor stall ratio is 2.52:1 (4WD)

Steering

Front wheel full power hydrostatic system utilising the main hydraulic pump via a steering priority valve. In the event of engine failure, emergency steering is maintained (all models).

Brakes

Service: Hydraulically actuated dual line, self-adjusting, oil immersed, multi-disc type on the rear axle, well protected from dirt, water etc. requiring no maintenance.

Parking: Hand operated, disc brake on rear axle input disc.

Brake pedal: Two independently operable foot pedals enable machine to manoeuvre in tight spaces. Pedals are linked together for normal use.

2WD / 4WD: Electrical selection between 2WD / 4WD allows on-the-move changes.

Hydraulic system

- JCB vari-matic hydraulics
- Main relief valve: 228bar
- Unloader valve: 207bar
- Pump type: 2 section displacement gear
- Pump capacity: 123 lpm
- Filtration through suction strainer and return line JCB Filtermatic filter
- During excavation the circuit automatically varies hydraulic power to match digging conditions for extra performance, control and power
- Careful routing of hydraulic hoses and pipework guards against site damage and allows easy servicing

CAB

- Floormats
- Fully adjustable seat and soft touch steering wheel •
- 'Walk through' two door access
- Seat belt, large convex rear view mirror, interior light front screen wiper, horn, hazard warning system, tool box
- Instrumentation panel includes engine speed, engine hours, fuel level, water temperature gauge and 12v connection
- Audible and visual fault warning system for alternator charge, coolant temperature, engine oil pressure, blocked air filter, transmission oil pressure and temperature, and hand brake on.

Axles

Rear: Drive axle rigidly mounted, incorporates JCB Max-Trac torque proportioning differential, driven by short propshaft from gear box.

Front: 4WD, Steer axle, centrally pivoted with oscillation angle of 16°.

Electrical and Instrumentation

12 volt negative ground, utilising wiring and connectors meeting IP69 water ingress test standard. Central fuse panel.

2. Type 3 engines and tactical water tenders shall be equipped with a foam proportioner system.
3. All water tenders and engine types 3 through 6 shall be able to prime and pump water from a 10 foot lift.

A Type 3 fire truck is often referred to as a wildland fire truck. Typically used in rural and wildland settings, a Type 3 truck includes several unique design and configuration details to match the terrain it services.

[Wildland fire trucks](#) commonly sit on a commercial 4×4 chassis and can be used as wildland urban interface vehicles. They are designed to be sleek and maneuverable with the ability to manage off-road and variable terrain. Type 3 trucks are often responding to wildfires and must be able to get as close to the fire as possible while maintaining both stability and vehicle control. The Gross Vehicle Weight Rating (GVWR) is often more than 26,000 lbs. and the vehicle must be equipped to carry at least 3 passengers.

NFPA standards require a Type 3 engine to have a minimum of a 500-gallon water tank and a pump capable of a minimum of 150 US gallons per minute at a pressure of 250 pounds per square inch.

[Type 3 trucks](#) can be equipped with a power-take-off (PTO) pump. A PTO pump is designed so that a vehicle can remain in motion while fighting fire simultaneously.

Many Type 3 trucks also feature an auxiliary pump in addition to the main water pump configured on a truck. The auxiliary pump can be powered by a separate diesel engine that is connected to the pump, or a hydraulic auxiliary pump can be powered by an additional PTO hydraulic circuit with its own pressure governor. This pump-and-roll technique means that a truck operator can drive the truck while crew members man the pump and hoses walking beside the moving vehicle. This is critically important to allow firefighters to follow along as forest fires and brush fires move with the weather, and to create fire lines, wetting down areas ahead of an advancing wildfire.

CERTIFICATE OF INDEPENDENT BID DETERMINATION**MBD 9**

1. This **Municipal Bidding Document (MBD)** must form part of all bids¹ invited.

2. Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.

3. Municipal Supply Regulation 38 (1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:

a. take all reasonable steps to prevent such abuse;

b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and

c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.

4. This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.

5. In order to give effect to the above, the attached Certificate of Bid Determination (MBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
